

Patient Wellness Malaffi Provider Portal Quick Reference Guide

The Patient Wellness Panel provides a comprehensive, integrated view of key information related to a patient's profile. This panel consolidates laboratory biomarkers and includes an AI-driven summary highlighting essential patient details such as active medications, allergies, and a history of chronic conditions.

In addition, the Wellness Panel displays the patient's most recent vital signs and captures physical activity data through integration between the portal and the patient's wearable devices. This enables a more complete and continuous understanding of the patient's overall health and wellness.

1. Accessing the patient wellness panel

- Access the patient's Malaffi file through your EMR system.
- Navigate to either the Delta View or the Patient Summary tab, then select the Patient Wellness folder.
- The Patient Wellness details will open in the central pane of the screen.

2. Tooltip

3. Biomarkers and Vital Metrics: The most recent vital signs will be displayed, provided that this information has been recorded for the patient.

4. Biomarkers: Laboratory results are organized by body system (e.g., cardiovascular, hematological). Values highlighted in red indicate abnormal results.

5. Clinical Summary: An AI-generated clinical summary is available within this section, presenting key aspects of the patient's clinical profile based on information documented in the Malaffi file.

6. Immunisations: This section provides a historical list of the patient's immunisations, including the dates of completion.

7. Physical Activities: This section displays data synchronized from the patient's wearable devices. It tracks moderate to vigorous physical activity levels and presents the corresponding recorded values.
